

Amplitude Laser Group

HIGH ENERGY AND ULTRAFAST LASERS

Amplitude Laser Group in the U.S.

Following the successful acquisition of Continuum in 2014, Amplitude Laser Group is actively consolidating resources in North America at the Continuum facility in San Jose, California. Continuum moved to this new location in February 2014 just prior to the acquisition. The 52,000 sq. ft.

facility, designed for cleanroom manufacturing of critical components and systems, as well as an extensive suite of final test labs, has space to accommodate the growth of the Amplitude Laser Group for years to come.

Amplitude Systèmes is currently managing the needs of U.S. based OEM customers with new dedicated service labs, and a sales support team based in San Jose. Amplitude Technologies and Continuum will be assembling large scale Terrawatt and Petawatt ultrafast lasers in San Jose starting in 2016, using Continuum pump sources and ultrafast components and subsystems from France. Continuum and Amplitude Technologies already have a collaborative team working on the ILE Apollon laser contract to supply a kilojoule class liquid-cooled disk laser to France.

Amplitude Laser Group is one of the world's leading suppliers of solid state lasers. From petawatt peak powers to kilojoule pulse energies and high average power industrial lasers, Amplitude Laser Group offers a wide range of systems for medical, industrial and research applications.
